Vision and mission

Vision: An Australia where nature and people thrive

Mission: To empower people to stand up for nature

Products / services

- Advocacy campaigns
- Research & policy reports
- Land Clearing Tracker
- Petitions, webinars & memberships

Objectives

Save Our Big Backyard

- Protect and regenerate nature
- End extinction

Renewable Powered Australia

- Transition to renewable energy
- Reduce climate pollution

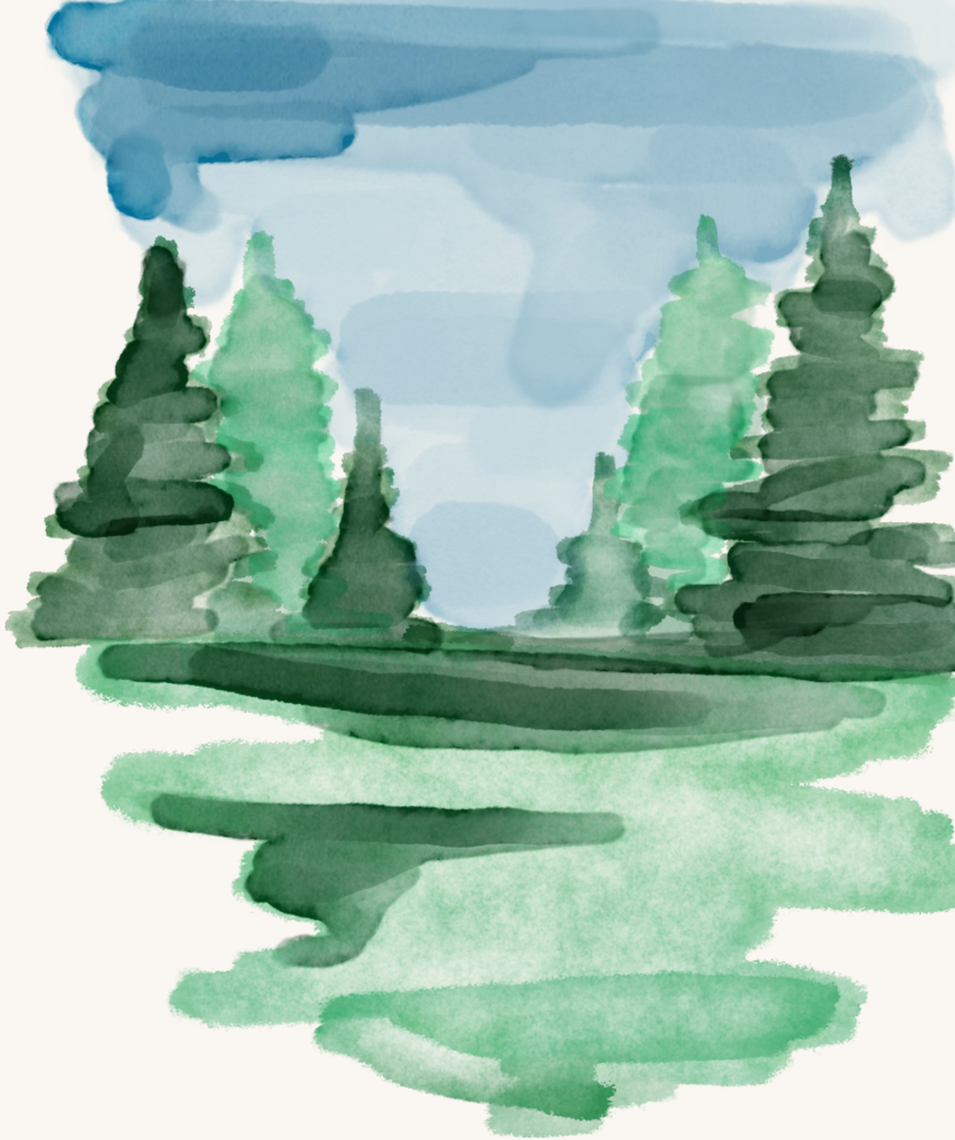

Target audience

- Community supporters
- Volunteers and donors.
- Government & decision-makers
- Businesses & investors
- Journalists

Missing/Poor

Key Findings
Based on NAC Social Media Profiles

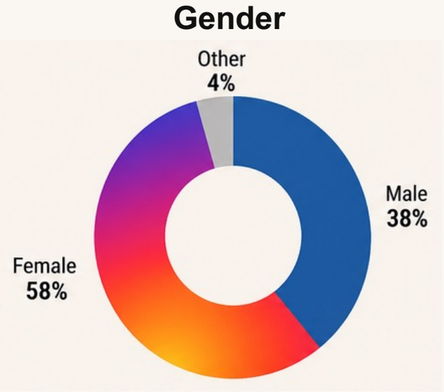

- According to the Profile Completeness audit **Instagram** uses a campaign-specific landing page, while **TikTok** and **X** direct users to the NAC homepage. **Facebook**, **LinkedIn** and **YouTube** do not display an external profile link.
- **Facebook**, **X**, **LinkedIn** and **YouTube** present less consistent profile messaging, weakening NAC's brand message.
- **TikTok**, **Facebook**, and **LinkedIn** use less compelling CTAs, while **YouTube** and **X** do not include a clear CTA.

Instagram Audience

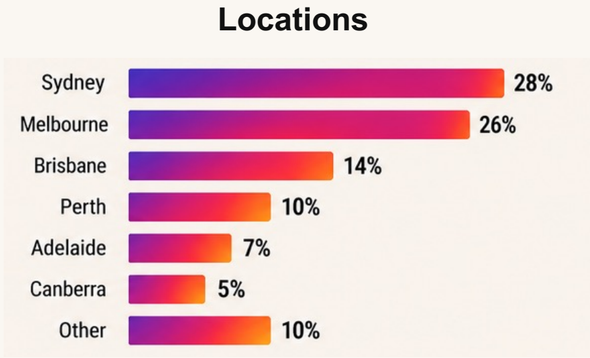

NatureAdvocates COLLECTIVE

30K Followers

Gender

Gender data from the Instagram Audience dashboard show that 58% of Instagram followers are female, indicating stronger engagement among women interested in environmental advocacy.

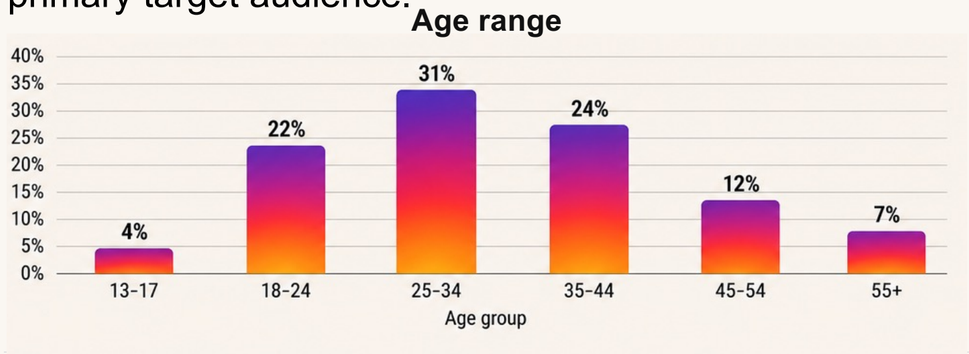

Geographic location

Location data from the Instagram dashboard indicate that followers are concentrated in Sydney (28%) and Melbourne (26%), highlighting strong reach in Australia's largest metropolitan markets.

Age range

Age demographic data from the Instagram Audience dashboard show that the majority of followers are aged 25–44 (56%), aligning with NAC's primary target audience.

Audience Segments

- Based on insights from the Instagram Audience dashboard, the core audience comprises university-educated professionals aged 25–44 with a strong interest in environmental and climate issues.

Source: NAC Social Media Profiles (2026). Audience dashboard.

Content quality & relevance

Content Quality?

- Content analysis from the Instagram Content dashboard indicates consistent branding aligned with NAC's environmental advocacy mission.

Audience Relevance

- Content analysis from the Instagram Content dashboard suggests the content aligns with NAC's target audience through relevant environmental messaging.

Strongest Example

- Instagram Content dashboard data show the Community Story post achieved the highest ER (1.37%), suggesting personal storytelling encourages stronger engagement.
- The post features a member's experience of switching from gas to electric and saving $2,000.

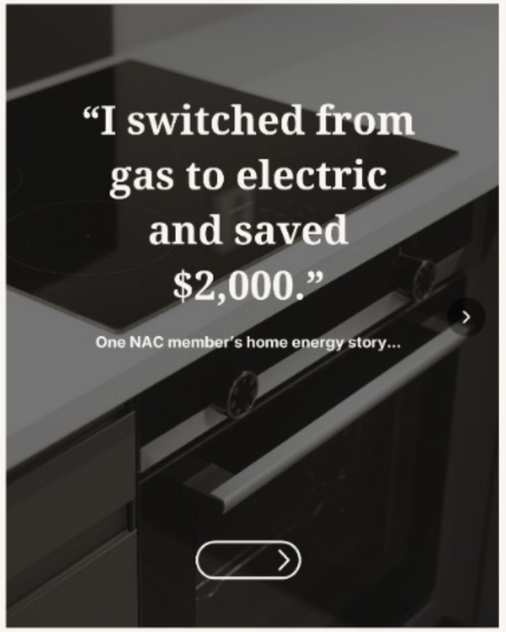

Weakest Example

- Instagram Content dashboard data show the Science Explainer post recorded the lowest ER (0.49%), suggesting informational content generated lower engagement.
- The post relies on fact-based messaging with limited emotional appeal.

Posts analysed (May 2026)

Highest-performing post

- **Theme: Community Story**
- **Engagement Rate 1.37%**

Posted: 21 May 2026

Lowest-performing post

- **Theme: Science Explainer**
- **Engagement Rate 0.49%**

COLLECTIVE

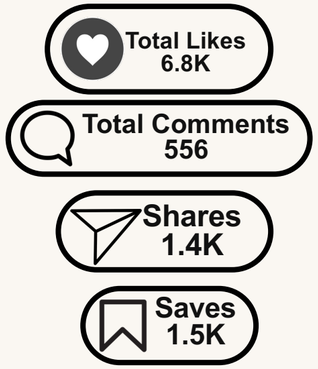

Engagement

Engagement Performance

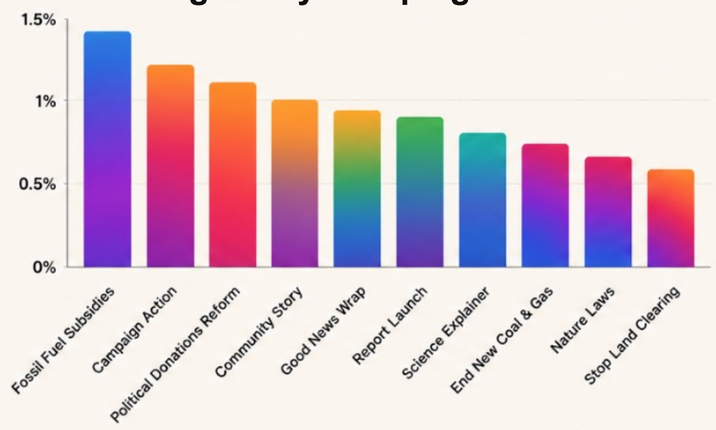

- Engagement data from the Instagram Engagement dashboard show 6.8K likes, 1.5K saves and 1.4K shares, reflecting strong audience interaction.
- The average engagement rate (0.98%) exceeded the industry benchmark (0.48%).
- Engagement remained consistently high, peaking in December 2025.

Engagement Rate Over Time

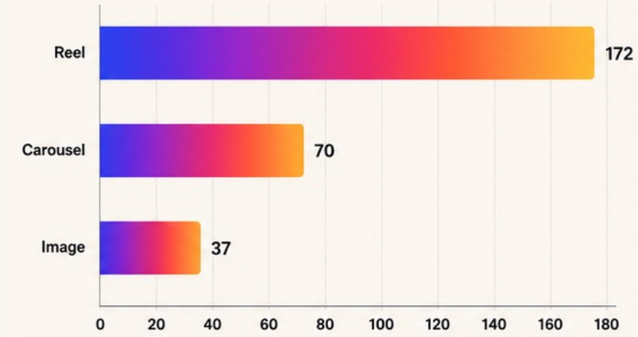

Avg ER by Campaign Theme

Campaign Themes

- Campaign theme data from the Instagram Engagement dashboard show Fossil Fuel Subsidies and Campaign Action achieved the highest average engagement, suggesting audiences respond well to action-oriented content.

Avg Engagement by Content Type

Content Formats

- The Average Engagement by Content Type graph shows Reels generated the highest average engagement (172), highlighting short-form video as Instagram's strongest-performing format.

TikTok Audience

12.0K Followers

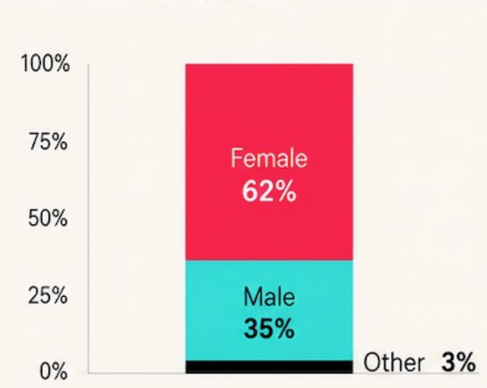

Top Locations

- **Geographic location**

  The location graph shows that NAC's TikTok audience is concentrated in Sydney (26%) and Melbourne (24%), while also maintaining a broad geographic reach across Australia.

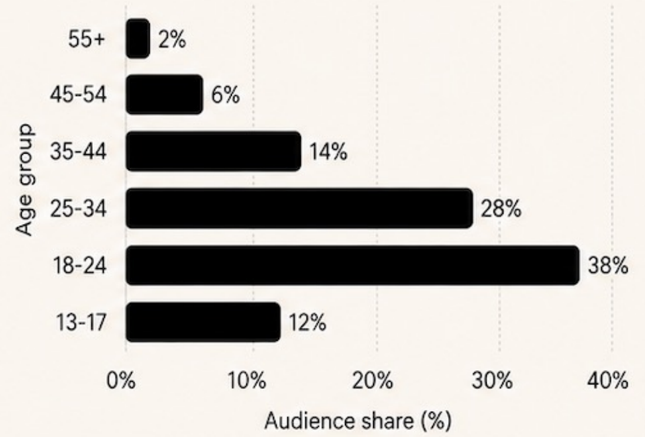

Gender

- **Gender**

  Gender data from the TikTok Audience dashboard show that women account for 62% of followers, indicating environmental content resonates more strongly with female audiences.

Age Range

- **Age range**

  Age demographic data from the TikTok Audience dashboard show the largest audience is aged 18–24 (38%), followed by 25–34 (28%), indicating TikTok is most effective for reaching younger climate-conscious audiences.

- **Audience Segments**

  The Audience Segments section identifies climate-conscious adults aged 18–24 as TikTok's core audience, supporting the platform's role in engaging younger audiences through short-form video.

COLLECTIVE

Content quality & relevance

Content Quality

Both videos maintain consistent branding, high production quality and messaging aligned with NAC's environmental advocacy mission.

Audience Relevance

- Short, news-driven content with immediate real-world impact is more relevant to TikTok's younger audience and encourages higher engagement (Owens, 2024).

Strong Example

- TikTok Content dashboard data show the Nature Laws post achieved the highest engagement rate (4.32%), suggesting timely environmental news drives stronger audience engagement.
- The headline "OMG it happened?" immediately communicates a significant outcome.

Weak Example

- TikTok Content dashboard data show the Science Explainer post recorded the lowest engagement rate (3.44%), suggesting educational content generated lower engagement.
- The post focuses on explaining a topic rather than telling a story or celebrating an achievement.

Posts analysed (May 2026)

Highest-performing post

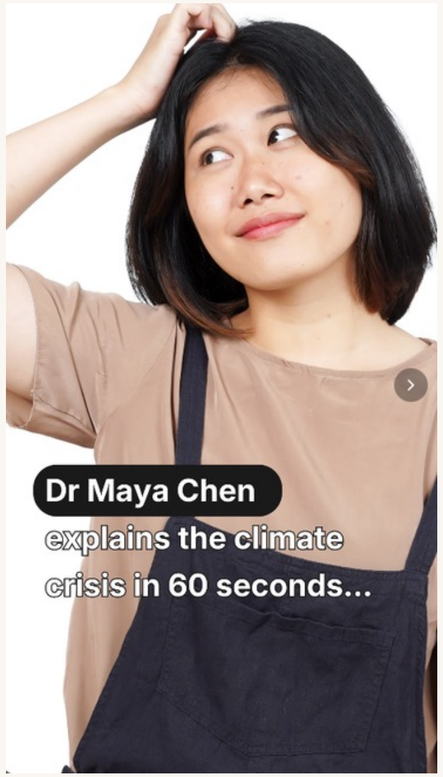

- **Theme: Nature Laws**
- **Engagement Rate: 4.32%**

Posted: 7 May 2026

Audience

NatureAdvocates COLLECTIVE

8.0K Followers

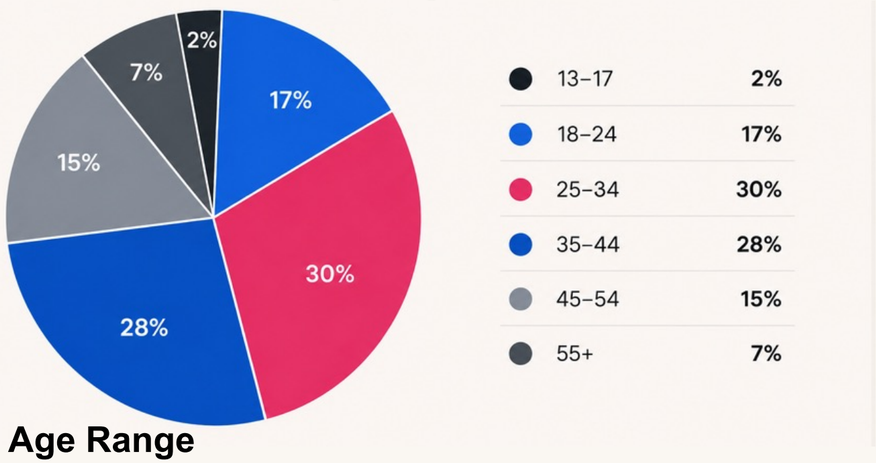

Gender

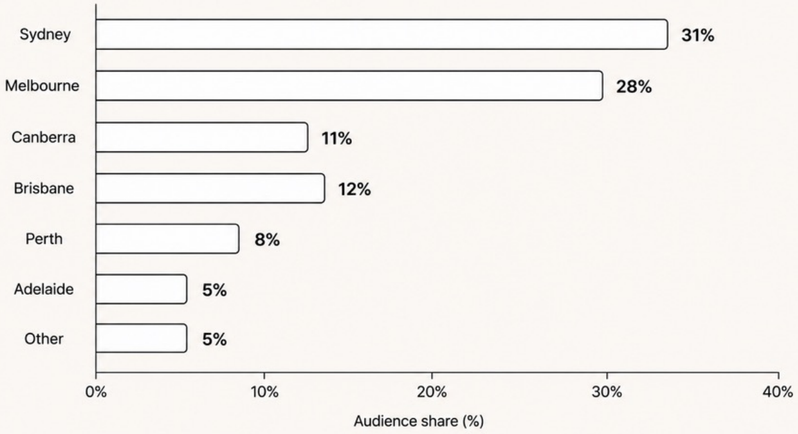

Gender

Gender data from the X Audience dashboard show male followers account for 58% of the audience, indicating stronger engagement among policy- and news-oriented users.

Age range

Top Locations

Geographic Location

Location data from the X Audience dashboard show followers are distributed across Australia's major cities, led by Sydney (31%) and Melbourne (28%), indicating broad national reach.

Age Range

Age demographic data from the X Audience dashboard show most followers are aged 25–34 (30%), followed by 35–44 (28%), indicating X is effective for reaching working-age professionals.

Audience Segments

Insights from the X Audience dashboard suggest the core audience comprises university-educated professionals aged 25–44 interested in science, policy and collective action.

Source: NAC Social Media Profiles (2026). Audience dashboard.

NatureAdvocates
COLLECTIVE

Content quality & relevance

Posts analysed (May 2026)

Content Quality

Both posts deliver concise environmental news, policy updates aligned with NAC's X audience.

Audience Relevance

Research findings and policy updates are well suited to X's professional audience, which actively follows environmental and public affairs.

Strong Example

X Content dashboard data show the Report Launch post achieved the highest engagement rate (0.37%), suggesting evidence-based research content encouraged stronger audience engagement.

Weak Example

X Content dashboard data indicate the End New Coal & Gas tweet recorded the lowest engagement rate (0.18%), suggesting posts presenting original research findings resonated more strongly than policy commentary alone.

Highest-performing post

- **Theme: Report Launch**
- **Engagement Rate: 0.37%**

International Women's Day: Celebrating the women leading climate action in Australia 💚

Today we want to recognise the extraordinary women at the forefront of Australia's climate movement — scientists, lawyers, community organisers, First Nations land defenders and advocates of every kind.

At NAC, women make up the majority of our research team, our campaign leadership and our board. Their work is the backbone of everything we do.

We're celebrating:

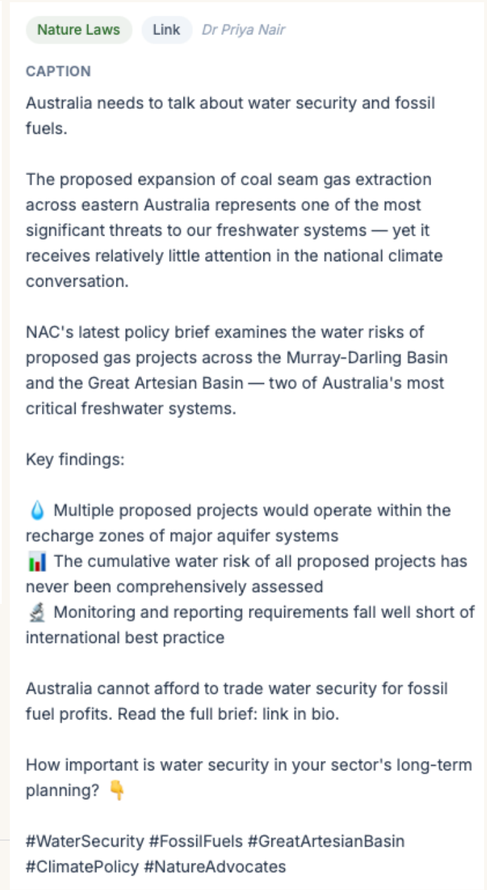

🔬 Dr Maya Chen — whose climate research has informed national policy decisions
🏛️ Dr Priya Nair — whose public health work is shifting how we understand the human cost of fossil fuels
⚡ Dr Lena Marsh — whose energy analysis is redefining the economic case for clean transition

Who is the woman in climate action that you most admire? Tag them below. 💚

#IWD #WomenInClimate #WomenInLeadership #ClimateAction #Sustainability #NatureAdvocates

Nature Laws | Link | *Dr Priya Nair*

CAPTION

Australia needs to talk about water security and fossil fuels.

The proposed expansion of coal seam gas extraction across eastern Australia represents one of the most significant threats to our freshwater systems — yet it receives relatively little attention in the national climate conversation.

NAC's latest policy brief examines the water risks of proposed gas projects across the Murray-Darling Basin and the Great Artesian Basin — two of Australia's most critical freshwater systems.

Key findings:

💧 Multiple proposed projects would operate within the recharge zones of major aquifer systems
📊 The cumulative water risk of all proposed projects has never been comprehensively assessed
🔬 Monitoring and reporting requirements fall well short of international best practice

Australia cannot afford to trade water security for fossil fuel profits. Read the full brief: link in bio.

How important is water security in your sector's long-term planning? 👇

#WaterSecurity #FossilFuels #GreatArtesianBasin #ClimatePolicy #NatureAdvocates

Posting frequency & scheduling (June 2025 - June 2026)

Posting Frequency

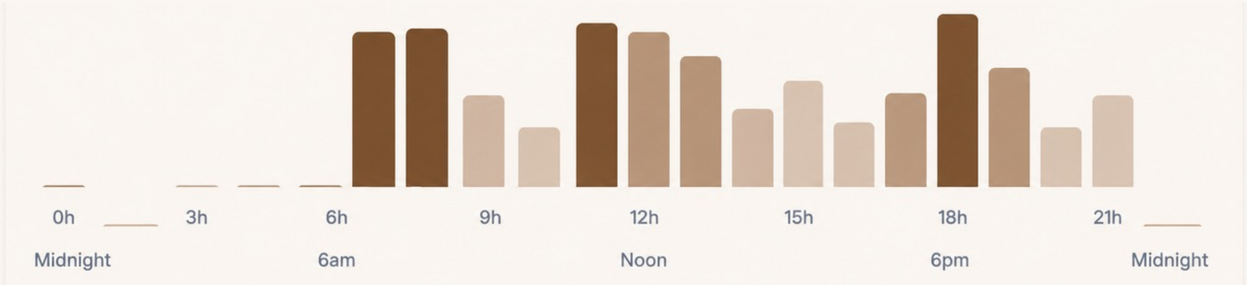

- The Posting Frequency by Platform chart indicates NAC maintained recommended publishing frequencies across all major platforms.
- X/Twitter was the most active platform (520 posts), supporting real-time advocacy and policy updates.
- YouTube published 24 videos annually (≈2 videos/month), slightly exceeding the recommended schedule.

- The Weekly Publishing Pattern heatmap indicates posting activity was concentrated on Wednesday and Thursday, while weekend publishing remained limited.

Posting Timing

The Posting Timing chart indicates most posts were published between 7 AM and 9 PM (AEST), with activity peaking during the morning (7–8 AM), midday (11 AM–12 PM) and evening (6–7 PM).

Hashtags & keywords

- **Top Hashtags**

  The Top Hashtags table in the Content & Posts dashboard reveals NAC consistently used policy, environmental and branded hashtags, with **#AusPol**, **#ClimateAction**, **#ClimateChange** and **#NatureAdvocates** being the most frequently used.

- **Reach & Relevance**
  - The hashtags are highly relevant to environmental advocacy, policy and climate issues, improving discoverability among NAC's target audience.
  - Branded hashtags strengthen campaign recognition and reinforce NAC's brand identity across platforms.

- **Improvement Opportunities**
  - The ranking shows duplicate hashtags variations caused by inconsistent capitalisation such as **#AusPol/#auspol** and **#ClimateAction/#climateaction**, indicating opportunities to standardise hashtag usage, improving campaign tracking, brand identity and search consistency.

Hashtags Ranking

Competitor analysis

PLATFORM	THE CLIMATE	GREENPEACE AUSTRALIA	NATURE ADVOCATES
Instagram	195.0K	88.0K	30.0K
TikTok	48.0K	22.0K	12.0K
Facebook	320.0K	145.0K	20.0K
X/Twitter	62.0K	41.0K	8.0K
LinkedIn	28.0K	15.0K	5.0K

Engagement Rate Comparison

GREENPEACE

Strengths (compared to NAC)

- Competitor Followers Comparison table indicates a larger audience across all major platforms.
- Broader environmental focus, including biodiversity, oceans and direct action.

Weakness (compared to NAC)

- Lower engagement than NAC on Instagram, Facebook and X.
- Greater focus on activism, while NAC emphasises policy and community storytelling.

CLIMATE COUNCIL

Strengths (compared to NAC)

- Competitor Followers Comparison table indicates the largest audience (653K followers).
- Strong focus on evidence-based policy communication.

Weaknesses (compared to NAC)

- Engagement Rate Comparison chart indicates NAC achieved higher engagement on Instagram, Facebook and X.
- Less community storytelling than NAC.

SECTION

03

Recommendations & Conclusion

NatureAdvocates
COLLECTIVE

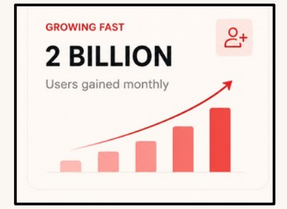

Recommendation 1 - YouTube Shorts

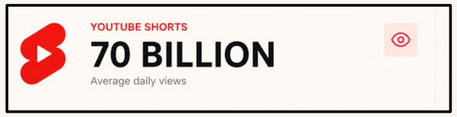

Recommendation

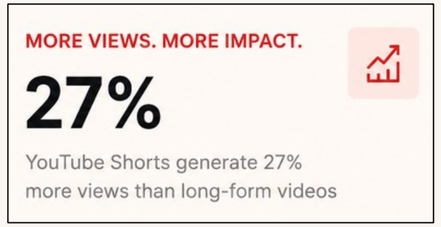

Expand YouTube Shorts by publishing the same short-form video content simultaneously across YouTube, Instagram Reels and TikTok.

Justification

- YouTube achieved 134.8K views and 4.90% average engagement rate, but NAC does not currently publish YouTube Shorts.
- Short-form video generated the highest engagement on Instagram and TikTok.
- Existing short-form videos can be reposted across platforms, making this a low-cost and efficient content strategy.
- According to Adobe Express (2023) YouTube short video generated 27% more views than long video.
- YouTube Shorts records an average of 70 billion daily views and reaches over 2 billion monthly users (Henke, 2025).

Implementation

- Publish 2-3 shorts per week, simultaneously on YouTube Shorts, Instagram Reels and TikTok
- Optimise captions, hashtags and thumbnails for each platform.
- Include links to relevant campaign pages and full-length YouTube videos.
- Monitor monthly views, watch time, and click-through rates to optimise future content.

Source: NAC Social Media Profiles (2026). YouTube dashboard.

Recommendation 2 - Strengthen Platform Linking

Recommendation

Standardise website links by directing all social media platforms to the NAC homepage.

Insights

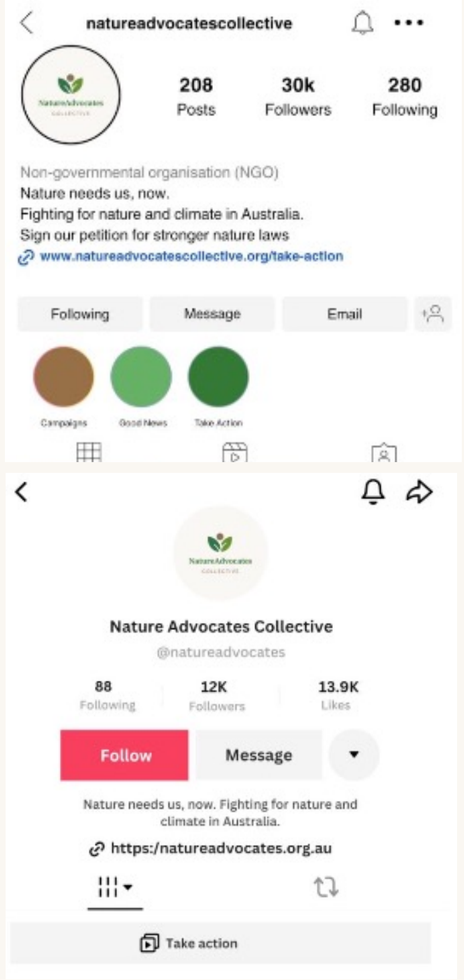

- According to the Profile Completeness audit, Instagram links users to the Take Action campaign page, while Facebook and TikTok direct users to the NAC homepage.
- LinkedIn, X and YouTube do not include a website link in their profiles.

Justification

- Standardising website links strengthens brand consistency and provides a consistent user experience across all platforms.
- Directing users to the NAC homepage enables easy access to campaigns, petitions, donations and other key information from a single destination.
- Seamless cross-channel integration strengthens the customer experience (Lemon & Verhoef, 2016).

Implementation

- Update all social media profile links to the NAC home page.
- Ensure the homepage prominently features current campaigns, petitions and donation opportunities.
- Use UTM links to track website traffic and user behavior from each social media platform.
- Review and update profile links monthly to maintain consistency across all platforms.

Source: Nature Advocates Collective (2026).

NatureAdvocates
COLLECTIVE

Recommendation 3 - Expand Posting Schedule

Recommendation

Optimise posting times to align with platform-specific audience activity.

Insights

- The Weekly Publishing Pattern heatmap shows NAC mainly posts on Wednesday and Thursday, with limited weekend activity.
- The Publishing Heatmap indicates posting peaks at 7–8am, 11am–12pm and 6–7pm.
- Industry benchmarks indicate different peak engagement periods across platforms.

Justification

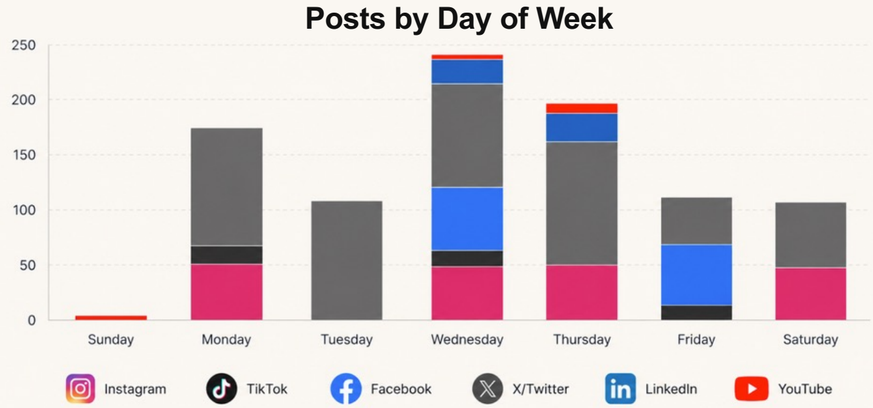

- The Weekly Publishing Pattern and Publishing Heatmap suggest NAC's current posting schedule does not fully align with platform-specific peak audience activity.
- Aligning publishing schedules with peak audience times can improve reach and engagement.

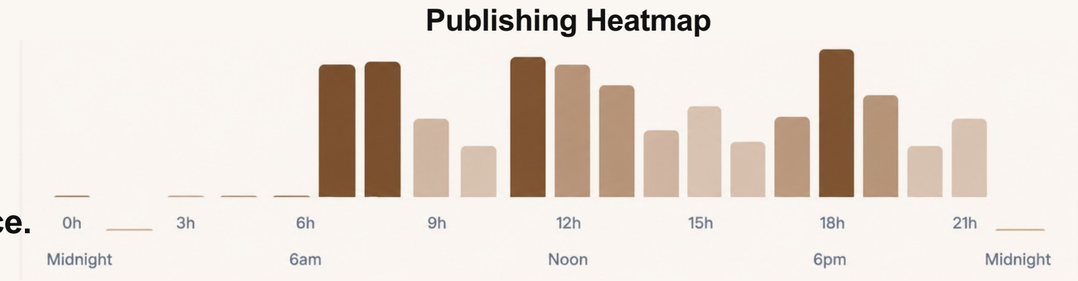

Implementation

- Instagram: 7–9am and 5–8pm (Wed–Thu)
- TikTok: 7–10pm (Fri–Sat)
- Facebook: 9–11am and 7–9pm (Tue & Thu)
- X: 7–9am and 12–1pm; increase posting during policy/news events.
- LinkedIn: Tue–Thu, 8–10am and 12–1pm; reduce weekend posts.

Implement the revised schedule for two months and evaluate engagement performance.

Platform	Peak Online Times	Priority Da
Instagram	Weekdays, 7:00 to 9:00 am and 5:00 to 8:00 pm	Wednesday and Thursday
TikTok	7:00 to 10:00 pm	Friday and Saturc
Facebook	Weekdays, 9:00 to 11:00 am and 7:00 to 9:00 pm	Tuesday and Thu
X (Twitter)	Weekdays, 7:00 to 9:00 am and 12:00 to 1:00 pm. Post during major policy and news events.	Weekdays
LinkedIn	Tuesday to Thursday, 8:00 to 10:00 am and 12:00 to 1:00 pm. Minimise weekend posts.	Tuesday to Thurs

NatureAdvocates
COLLECTIVE

Conclusion

- **Key Findings**
  - NAC maintains a consistent brand identity across major social media platforms.
  - Despite having a smaller audience than competitors, NAC achieved strong engagement on Instagram, TikTok and LinkedIn.
  - Short-form video, community storytelling generated the strongest audience engagement.
- **Recommendations**

  My recommendations will:
  - Improve profile consistency and customer experience.
  - Increase engagement by optimising content formats and posting schedules.
  - Strengthen long-term audience growth and campaign performance.
- **Closing Statement**

  By implementing these recommendations, Nature Advocates Collective can strengthen its digital presence, build deeper audience engagement and enhance the impact of its environmental advocacy campaigns.
